Attention: John Kassaras

Dear John

Subject: Classification of Stockpiled Stage 1 Derived Fill Material for Potential On-Site Reuse or Off-Site Disposal – Stage 2A – Earthworks 25 January 2013 to 16 April 2013

Introduction

URS Australia Pty Ltd (URS) has been requested by Darwin Waterfront Corporation (DWC) to provide a letter report on the status of material excavated during the construction works at Darwin Waterfront Stage 2A (the Site).

URS undertook sampling of the Stage 1 derived fill, which was used to create a temporary access for the previously proposed lock, at the Darwin Waterfront Precinct on 16 April 2013. As part of the environmental assessment works undertaken by URS, this material was sampled with the purpose of classification for potential on-site reuse, as per site specific acceptance criteria, or off-site disposal, as per Northern Territory Waste Classification Guidelines.

Methodology

It is estimated that approximately 7,000 m³ of fill material had been pulled back from the temporary access road and stockpiled in the stockpile management area. A total of 68 primary samples (1 sample per 102 m³ of bulked out fill material), five field duplicate and five field triplicate samples were taken from the fill material. Of the 68 samples collected, 35 primary samples, three field duplicate and three field triplicate samples were analysed, providing an analytical rate exceeding the 1 sample per 250 m³ of bulked out spoil recommended by the Victorian EPA Industrial Waste Resource Guidelines, IWRG 702 sampling density for stockpiles >5000m³ when using the 95% upper control limit (UCL) average.

All samples were collected with the assistance of a 5 T excavator to cut representative cross sections through the stockpile profile. Samples were collected by hand from the excavated spoil, using dedicated nitrile gloves for each sample, and placed into laboratory supplied jars for transport to the laboratory. Standard environmental protocols were followed with respect to sample collection, and laboratory analyses included quality assurance/quality control samples to enable URS's assessment of the suitability of the data for interpretive use.

J:\Jobs\42213719\2012-13 STAGE 2A\Stockpile Classification and Off-site Disposal\16 April 2013 Classification Report\Classification Letter - 280513AW.docx

Soil analytical results have been compared against the following guidelines for assessment of material for off-site disposal, as summarised in **Attachment A**:

- The “NT Waste Classification Guidelines” adopted from NSW DECCW Waste Classification Guidelines (2008); and
- The site specific acceptance criteria (URS RAP V6 9th August 2005) based on National Environment Protection (Assessment of Site Contamination) Measure – Health Based Investigation Levels (NEPM, 1999) – HILs E and F and Ecological Intervention Levels (EILs); and Dutch Intervention Criteria (2000).

Data Validation

URS has undertaken a review of the laboratory analytical results and considers the data acceptable for interpretive use as described in **Attachment D**. The following points have been raised and considered when making this assertion.

- No Field Blank or Trip Blank were analysed; hence potential cross-contamination has not been assessed directly. As no samples, including the Rinsate Blank (QCB01_160413), were reported to contain BTEXN or volatile TPH and all samples were taken from the excavator's bucket, fresh gloves and placed directly into the sample container, the potential for cross-contamination is minimal; concentrations of zinc (0.045 mg/L) were detected above the LOR in the rinsate sample collected on 16 April 2013 (QCB01_160413) in batch ES1309212. Soil samples collected on the 16 April 2013 were all reported with concentrations of zinc well above the LOR; hence this is not considered to affect the interpretation of the results.
- Laboratory duplicate RPDs exceeded LOR based limits for Chromium, Manganese, Vanadium and Zinc. This apparent lack of precision is likely due to heterogeneity of the distribution of these analytes in soils at the site, and should be taken into consideration when evaluating individual results close to the investigation levels.
- Matrix spike recoveries were reported less than the lower data quality objective for Manganese, Zinc and Barium. The accuracy of these analytes is considered acceptable based on other quality control data including method blanks, laboratory control spikes, surrogates and matrix spikes for analytes analysed under the same analytical method.
- The Laboratory Control Spike (LCS) recoveries for several PAHs and Pentachlorophenol were reported greater than the upper control limits; hence, there is the potential for the results to be biased high. Further, the LCS recoveries for 4,4- DDE was reported less than the lower control limits; hence, there is the potential for the results to be biased low. Due to the presence of other quality control data, including method blanks, matrix spikes and surrogate recoveries, and as these analytes were not reported above the laboratory LOR, the accuracy of the analytical data for these analytes is considered acceptable.
- Several field duplicate and triplicate RPDs exceeded control limits for metals. For most samples, reported concentrations were either well above or below the adopted ILs; however, the apparent lack of precision should be taken into consideration when evaluating individual results, particularly where concentrations are reported close to the adopted investigation level.

Laboratory Results

The laboratory results are summarised and assessed against the relevant off-site disposal criteria in **Attachment A**. Laboratory analytical reports and chain of custody (COC) documentation are provided as **Attachment B**.

On-Site Reuse – Site Specific Acceptance Criteria (URS RAP V6 – 9 August 2005)

Table 1 On-Site Reuse Criteria – Site Specific Acceptance Criteria

| Analyte | Class 1 Criteria ^a | Class 2A Criteria ^a | # of Samples | # >LOR | # > Guideline | 95% UCL |
|-----------------|-------------------------------|--------------------------------|--------------|-----------|---------------|-------------|
| Arsenic | 20 | 200 | 41 | 33 | 0 | 13.8 |
| Barium | 300 | - | 21 | 21 | 1 | 157.9 |
| Chromium | - | - | 41 | 41 | NA | 45.6 |
| Cobalt | - | 200 | 21 | 11 | 0 | 2.6 |
| Copper | 100 | 2,000 | 41 | 41 | 1 | 30.8 |
| Lead | 600 | 600 | 41 | 41 | 1 | 115.9 |
| Manganese | 500 | 3,000 | 21 | 21 | 0 | 90.1 |
| Nickel | 60 | 600 | 41 | 41 | 0 | 7.7 |
| Vanadium | 50 | - | 21 | 21 | 13 | 96.6 |
| Zinc | 200 | 14,000 | 41 | 41 | 3 | 110.3 |
| Dieldrin | - | - | 21 | 41 | NA | 0.07 |

^a URS RAP V6 9th August 2005

No individual sample results, or 95% UCL of the mean, exceeded the site specific Class 1 guidelines for the following analytes:

- Arsenic;
- Lead;
- Manganese; and
- Nickel.

Individual sample results exceeded the site specific Class 1 guidelines for the following analytes. The 95% UCL of the mean for the same analytes did not exceed the site specific Class 1 guidelines:

- Barium; and
- Copper.

One individual sample result for lead (671 mg/kg) exceeded the site specific Class 2 guidelines. The 95% UCL of the mean for the same analytes did not exceed the site specific Class 1 guidelines.

All individual sample results and the 95% UCL of the mean exceeded the site specific Class 1 guidelines for vanadium as reported in **Table 1**. The exceedance in this instance is considered

indicative of background concentrations based on no historical handling of vanadium at the site, exceedance of the guideline was noted in all samples analysed for vanadium and both individual samples results and the 95% UCL of the mean are within the range that is considered background based on the "National Environment Protection (Assessment of Site Contamination) Measure [NEPM], Schedule B(1), "Investigation Levels for Soil and Groundwater" document (background range 20 to 500 mg/kg).

There was no applicable site specific Class 1 guideline value for these analytes:

- Chromium;
- Cobalt; and
- Dieldrin.

Off-Site Disposal Criteria – NT Waste Classification Guidelines

Table 2 Off-Site Disposal Criteria – NT Waste Classification Guideline

| Analyte | NT Waste Classification Guideline (No Leach) | NT Waste Classification Guideline (with Leach) | # of Samples | # >LOR | # > Guideline | 95% UCL |
|-------------|----------------------------------------------|------------------------------------------------|--------------|-----------|---------------|--------------|
| Arsenic | 100 | 500 | 41 | 33 | 0 | 13.8 |
| Barium | - | - | 21 | 21 | NA | 157.9 |
| Chromium | - | - | 41 | 41 | NA | 45.6 |
| Cobalt | - | - | 21 | 11 | NA | 2.6 |
| Copper | - | - | 41 | 41 | NA | 30.8 |
| Lead | 100 | 1,500 | 41 | 41 | 1 | 115.9 |
| Manganese | - | - | 21 | 21 | 0 | 90.1 |
| Nickel | 40 | 1,050 | 41 | 41 | 0 | 7.7 |
| Vanadium | - | - | 21 | 21 | NA | 96.6 |
| Zinc | - | - | 41 | 41 | NA | 110.3 |
| Dieldrin | - | - | 21 | 41 | NA | 0.07 |

No individual sample results, or 95% UCL of the mean, exceeded the NT Waste Classification guidelines for the following analytes:

- Arsenic;
- Manganese; and
- Nickel.

One individual sample result for lead (671 mg/kg) and the 95% UCL of the mean exceeded NT Waste Classification guidelines (No Leach) for lead as reported in **Table 2**, however this sample did not exceed the guideline value of the NT Waste Classification guidelines (with Leach).

There was no applicable NT Waste Classification guideline value for these analytes:

- Barium;
- Chromium;
- Cobalt;
- Copper;
- Manganese;
- Vanadium;
- Zinc; and
- Dieldrin.

Conclusion and Recommendation

The stockpiled material resultant from the Stage 1 derived fill, which was used to create a temporary access for the previously proposed lock, has been characterised based on the results of the field observations, sampling and analysis conducted by URS as presented in the attached tables.

On the basis of the analytical results for samples collected from the material stockpiled between 25 January 2013 and 16 April 2013 at a rate of at least 1:250 m³, the stockpiled material is classified as Class 2 with reference to the site specific acceptance criteria detailed in the RAP (URS, 9 August 2005) on the basis of elevated vanadium concentrations representing background conditions.

On the basis of the analytical results for samples collected from the material stockpiled between 25 January 2013 and 16 April 2013 at a rate of at least 1:250 m³, the stockpiled material is classified as Restricted Solid Waste with reference to the NT Waste Classification on the basis of one elevated lead concentration being marginally above the adopted guideline.

Classification and volume of assessed material

| | | |
|----------------------------------|------------------------|----------|
| Estimated Volume and Tonnage | 7,000 m ³ | 11,200 T |
| Classification On-Site Reuse | Class 2 | |
| Classification Off-Site Disposal | Restricted Solid Waste | |

It is recommended that if the receiving disposal site requires further testing in order to accept the material then it is suggested that leachate testing be undertaken, thus requiring further sampling to be carried out. Based on leachate testing undertaken on similar material from the Fort Hill area at the Darwin Waterfront in 2005, (URS report dated 22 March 2005) lead results did not exceed the guideline value of the NT Waste Classification guidelines (with Leach).

URS notes that this letter and the attached information is intended to support the process of on-site reuse or off-site disposal of the described soils to a suitable end-point. URS does not provide any recommendation or endorsement with respect to disposal of this material to any site; responsibility for accepting material to a third party site shall be the onus of the owner of that site.

Limitations

URS Australia Pty Ltd (URS) has prepared this report in accordance with the usual care and thoroughness of the consulting profession for the use of Darwin Waterfront Corporation (DWC). A complete or partial copy of the report may only be provided by DWC to the EPA (Victoria) accredited Environmental Auditor (Contaminated Land) appointed by DWC to the project and to developers and contractors (Interested Parties) working on the Darwin Waterfront Redevelopment Project if the entire limitations statement of this report is included in the complete or partial copy of this report. Whilst URS does not admit that any action may exist or be available to any Interested Party, this report may only be relied on by an Interested Party with the written consent of DWC and on the basis that subject to any law the terms of which cannot be excluded or modified by agreement:

- (i) The maximum amount payable (if any) by URS to Interested Parties or any party claiming through an Interested Party in aggregate, whether in contract, tort or otherwise, in relation to claims, damages, liabilities, losses or expenses, under or in any way related to this report and/or its appendices or the services performed by URS to prepare the Report, shall be A\$2,000,000; and
- (ii) If there is more than one Interested Party, the maximum amount payable to any and all Interested Parties in total shall be A\$2,000,000.

Except as specifically stated in this limitations statement, this report may not be used by any third party.

This report is based on generally accepted practices and standards at the time it was prepared. No other warranty, expressed or implied, is made as to the professional advice included in this report. It is prepared in accordance with the scope of work and for the purpose outlined in the proposal dated 24 August 2006 and subsequent requests for this specific task in an email dated 17 December 2012.

The methodology adopted and sources of information used by URS are outlined in this report. Where this report indicates that information has been provided to URS by third parties, URS has made no independent verification of this information except as expressly stated in this report. No indications were found during our investigations that information contained in this report as provided to URS was false.

This report was prepared between 13 May 2013 and 17 May 2013, and is based on the conditions encountered and information reviewed at the time of preparation. URS disclaims responsibility for any changes that may have occurred after this time.

We trust that the information detailed within this letter informs your requirements. Should you require further assistance please contact the undersigned.

General Comments

- This report contains the following information:
 - Sample Container(s)/Preservation Non-Compliances
 - Summary of Sample(s) and Requested Analysis
 - Proactive Holding Time Report
 - Requested Deliverables
- Samples received in appropriately pretreated and preserved containers.**
- Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- Samples "QAQC_02_160513", "QAQC_06_160513", "QAQC_10_160513" will be forwarded to MGT Labmark as requested. Please note that a shipping/handling fee may apply for this service.**
- Please be advised that samples "SP03_11_160413", "SP03_13_160413", "SP03_50_160413", "SP04_02_160413", "SP04_04_160413", "SP05_07_160413", "SP05_09_160413", "QAQC_01_160513", "QAQC_09_160513" were broken in transit to the laboratory.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Matt Goodwin.
- Analytical work for this work order will be conducted at ALS Brisbane.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- No sample container / preservation non-compliance exist.

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.

If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Matrix: SOIL

| | | No. of samples analysed | : 36 |

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

LOR = Limit of reporting

^ = This result is computed from individual analyte detections at or above the level of reporting

- **EG005T (Total Metals) : Sample EB1309212-001 (SP03_01_160413), 022 (SP03_22_160413), 043 (SP03_43_160413) show poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.**
- **EG005T (Total Metals) : Sample EB1309212-002 (SP03_02_160413), 044 (SP03_44_160413) show poor matrix spike recovery due to sample heterogeneity. Confirmed by visual inspection.**

NATA Accredited Laboratory 825

Accredited for compliance with
ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

Accredited for compliance with
ISO/IEC 17025.

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **SOIL**

Evaluation: * = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

| Quality Control Sample Type | | Count | | Rate (%) | | | Quality Control Specification |

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

| Analytical Methods | Method | Matrix | Method Descriptions |
|---------------------------------------------------------|------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Moisture Content | EA055-103 | SOIL | A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2010 Draft) Schedule B(3) Section 7.1 and Table 1 (14 day holding time). |
| Total Metals by ICP-AES | EG005T | SOIL | (APHA 21st ed., 3120; USEPA SW 846 - 6010) (ICPAES) Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (1999) Schedule B(3) |
| Total Mercury by FIMS | EG035T | SOIL | AS 3550, APHA 21st ed., 3112 Hg - B (Flow-injection (SnCl ₂)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl ₂ which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) |
| Hexavalent Chromium by Alkaline Digestion and DA Finish | EG048G | SOIL | USEPA SW846, Method 3060A. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2) |
| Polychlorinated Biphenyls (PCB) | EP066 | SOIL | (USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 504) |
| Pesticides by GCMS | EP068 | SOIL | (USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (1999) Schedule B(3) (Method 504,505) |
| TPH - Semivolatile Fraction | EP071 | SOIL | (USEPA SW 846 - 8015A) Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C36. This method is compliant with NEPM (1999) Schedule B(3) (Method 506.1) |
| PAH/Phenols (SIM) | EP075(SIM) | SOIL | (USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 502 and 507) |
| TPH Volatiles/BTEX | EP080 | SOIL | (USEPA SW 846 - 8260B) Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 501) |
| Dissolved Metals by ICP-MS - Suite A | EG020A-F | WATER | (APHA 21st ed., 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020): Samples are 0.45 um filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector. |

| Analytical Methods | Method | Matrix | Method Descriptions |
|-----------------------------|------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Dissolved Mercury by FIMS | EG035F | WATER | AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl ₂)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl ₂ which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2) |
| TPH - Semivolatile Fraction | EP071 | WATER | USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2) |
| PAH/Phenols (GC/MS - SIM) | EP075(SIM) | WATER | USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2) |
| TPH Volatiles/BTEX | EP080 | WATER | USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2) |

| Preparation Methods | Method | Matrix | Method Descriptions |
|-------------------------------------------------------------|--------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Methanolic Extraction of Soils for Purge and Trap | ORG16 | SOIL | (USEPA SW 846 - 5030A) 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS. |
| Tumbler Extraction of Solids (Option A - Concentrating) | ORG17A | SOIL | In-house, Mechanical agitation (tumbler). 20g of sample, Na ₂ SO ₄ and surrogate are extracted with 150mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis. |
| Tumbler Extraction of Solids (Option B - Non-concentrating) | ORG17B | SOIL | In-house, Mechanical agitation (tumbler). 10g of sample, Na ₂ SO ₄ and surrogate are extracted with 20mL 1:1 DCM/Acetone by end over end tumble. The solvent is transferred directly to a GC vial for analysis. |
| Separatory Funnel Extraction of Liquids | ORG14 | WATER | USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container. |

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

- For all matrices, no Method Blank value outliers occur.

Regular Sample Surrogates

- For all regular sample matrices, no surrogate recovery outliers occur.

Outliers : Analysis Holding Time Compliance

This report displays Holding Time breaches only. Only the respective Extraction / Preparation and/or Analysis component is/are displayed.

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

The following report highlights breaches in the Frequency of Quality Control Samples.

- No Quality Control Sample Frequency Outliers exist.

Subject: UPDATED REQUEST 02/05: EB1309212 - URSMAW - REBATCH ASAP
Attachments: RE: Batch EB1309212; image001.jpg
Importance: High

Hi James,

With the attached confirmation regarding the sample swap from the client received please REBATCH the below listed samples ASAP from EB1309212;

| ALS ID | Sample ID | Analytes |
|---------------|----------------|---------------------------------|
| EB1309212-010 | SP03_10_160413 | TPH C6-C9, BTEX, PAH and Metals |
| EB1309212-054 | SP04_04_160413 | TPH C6-C9, BTEX, PAH and Metals |
| EB1309212-056 | SP04_06_160413 | P-13/1 |

| Remark Type | | Remarks |
|------------------|--|---------------------------------------------------------------------------|
| WO Login Remarks | | Brisbane samples are in trays: 3456-S <-> 3460-S, 790-O, 100-ORC, 682-VOC |

This is now extra urgent.

Kind Regards,

Bryn Stephens

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

Accredited for compliance with
ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

| Signatories | Position | Accreditation Category |
|-----------------|------------------------|------------------------|
| Jonathon Angell | Inorganic Coordinator | Brisbane Inorganics |
| Jonathon Angell | Inorganic Coordinator | Brisbane Inorganics |
| Matt Frost | Senior Organic Chemist | Brisbane Inorganics |
| Matt Frost | Senior Organic Chemist | Brisbane Organics |
| Matt Frost | Senior Organic Chemist | Brisbane Organics |

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.

LOR = Limit of reporting

^ = This result is computed from individual analyte detections at or above the level of reporting

- EG005T(Total Metals by ICP-AES) Samples EB1310481 - 001 shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection
- EG005T(Total Metals by ICP-AES):Sample EB1310481 - 002 shows poor matrix spike recovery due to matrix interference. Confirmed by re-extraction and re-analysis.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

Accredited for compliance with
ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
 CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
 LOR = Limit of reporting
 RPD = Relative Percentage Difference
 # = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **SOIL**

Evaluation: ✖ = Holding time breach ; ✔ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: ✖ = Quality Control frequency not within specification ; ✔ = Quality Control frequency within specification.

| Quality Control Sample Type | | Count | | Rate (%) | | | Quality Control Specification |
|---------------------------------------------------------|------------|-------|---------|----------|----------|------------|--------------------------------------------------|
| Analytical Methods | Method | QC | Regular | Actual | Expected | Evaluation | |
| | | | | | | | |

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

| Analytical Methods | Method | Matrix | Method Descriptions |
|-------------------------------------------------------------|------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Moisture Content | EA055-103 | SOIL | A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2010 Draft) Schedule B(3) Section 7.1 and Table 1 (14 day holding time). |
| Total Metals by ICP-AES | EG005T | SOIL | (APHA 21st ed., 3120; USEPA SW 846 - 6010) (ICPAES) Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (1999) Schedule B(3) |
| Total Mercury by FIMS | EG035T | SOIL | AS 3550, APHA 21st ed., 3112 Hg - B (Flow-injection (SnCl ₂)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl ₂ which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) |
| Hexavalent Chromium by Alkaline Digestion and DA Finish | EG048G | SOIL | USEPA SW846, Method 3060A. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazine. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2) |
| Polychlorinated Biphenyls (PCB) | EP066 | SOIL | (USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 504) |
| Pesticides by GCMS | EP068 | SOIL | (USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (1999) Schedule B(3) (Method 504,505) |
| TPH - Semivolatile Fraction | EP071 | SOIL | (USEPA SW 846 - 8015A) Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C36. This method is compliant with NEPM (1999) Schedule B(3) (Method 506.1) |
| PAH/Phenols (SIM) | EP075(SIM) | SOIL | (USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 502 and 507) |
| TPH Volatiles/BTEX | EP080 | SOIL | (USEPA SW 846 - 8260B) Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 501) |
| Preparation Methods | Method | Matrix | Method Descriptions |
| Methanolic Extraction of Soils for Purge and Trap | ORG16 | SOIL | (USEPA SW 846 - 5030A) 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS. |
| Tumbler Extraction of Solids (Option A - Concentrating) | ORG17A | SOIL | In-house, Mechanical agitation (tumbler). 20g of sample, Na ₂ SO ₄ and surrogate are extracted with 150mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis. |
| Tumbler Extraction of Solids (Option B - Non-concentrating) | ORG17B | SOIL | In-house, Mechanical agitation (tumbler). 10g of sample, Na ₂ SO ₄ and surrogate are extracted with 20mL 1:1 DCM/Acetone by end over end tumble. The solvent is transferred directly to a GC vial for analysis. |

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

| Compound Group Name | Laboratory Sample ID | Client Sample ID | Analyte | CAS Number | Data | Limits | Comment |
|--------------------------------------------------|----------------------|------------------|-----------------------|------------|----------------|---------|---------------------------------------------------------------------------------------|
| Duplicate (DUP) RPDs | | | | | | | |
| EG005T: Total Metals by ICP-AES | EB1310481-001 | SP03_10_160413 | Chromium | 7440-47-3 | 119 % | 0-20% | RPD exceeds LOR based limits |
| EG005T: Total Metals by ICP-AES | EB1310481-001 | SP03_10_160413 | Manganese | 7439-96-5 | 131 % | 0-20% | RPD exceeds LOR based limits |

Sample Receipt Advice

Company name: **URS Australia Pty Ltd NT**

Contact name: **Andrew Piggin**

Client job number: **42213719.7**

COC number: **Not provided**

Turn around time: **5 Day**

Date/Time received: **Apr 19, 2013 3:45 PM**

Eurofins | mgt reference: **376318**

Sample information

- ☒ A detailed list of analytes logged into our LIMS, is included in the attached summary table.
- ☒ All samples have been received as described on the above COC.
- ☒ COC has been completed correctly.
- ☒ Attempt to chill was evident.
- ☒ Appropriately preserved sample containers have been used.
- ☒ All samples were received in good condition.
- ☒ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
- ☒ Organic samples had Teflon liners.
- ☒ Some samples have been subcontracted.
- N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Mark Rodriquez on Phone : (08) 8947 1557 or by e.mail: mark.rodriquez@mgtlabmark.com.au

Results will be delivered electronically via e.mail to Andrew Piggin - andrew_piggin@urscorp.com.

Note: A copy of these results will also be delivered to the general URS Australia Pty Ltd NT email address.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported. A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

| Description | Testing Site | Extracted | Holding Time |
|-----------------------------------------------------------------------------------------------|--------------|--------------|--------------|
| Total Recoverable Hydrocarbons - 1999 NEPM Fractions - Method: TRH C6-C36 - MGT 100A | Brisbane | Apr 23, 2013 | 14 Day |

Eurofins | mgt Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual PQLs are matrix dependant. Quoted PQLs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Acknowledgment.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

UNITS

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Units

TERMS

| | |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Dry | Where a moisture has been determined on a solid sample the result is expressed on a dry basis. |
| LOR | Limit of Reporting. |
| SPIKE | Addition of the analyte to the sample and reported as percentage recovery. |
| RPD | Relative Percent Difference between two Duplicate pieces of analysis. |
| LCS | Laboratory Control Sample - reported as percent recovery |
| CRM | Certified Reference Material - reported as percent recovery |
| Method Blank | In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water. |
| Surr - Surrogate | The addition of a like compound to the analyte target and reported as percentage recovery. |
| Duplicate | A second piece of analysis from the same sample and reported in the same units as the result to show comparison. |
| Batch Duplicate | A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis. |
| Batch SPIKE | Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis. |
| USEPA | United States Environment Protection Authority |
| APHA | American Public Health Association |
| ASLP | Australian Standard Leaching Procedure (AS4439.3) |
| TCLP | Toxicity Characteristic Leaching Procedure |
| COC | Chain of Custody |
| SRA | Sample Receipt Advice |
| CP | Client Parent - QC was performed on samples pertaining to this report |
| NCP | Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within |

QC - ACCEPTANCE CRITERIA

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries : Recoveries must lie between 50-150% - Phenols 20-130%.

QC DATA GENERAL COMMENTS

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxophene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxophene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Arochlor 1260 in Matrix Spikes and LCS's.
9. For Matrix Spikes and LCS results a dash " - " in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPD's are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

| | |
|-------------------------------------------------------------------------|-----|
| Custody Seals Intact (if used) | N/A |
| Attempt to Chill was evident | Yes |
| Sample correctly preserved | Yes |
| Organic samples had Teflon liners | Yes |
| Sample containers for volatile analysis received with minimal headspace | Yes |
| Samples received within HoldingTime | Yes |
| Some samples have been subcontracted | No |

Qualifier Codes/Comments

| Code | Description |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N01 | F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis). |
| N02 | Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid. |
| N04 | F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes. |

Data quality objectives

| | |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Field data comparison | No apparent anomalies were observed between laboratory results and field observations. |
| Frequency of field QC | Field QC samples were collected to project specifications. |
| Frequency of laboratory QC | The laboratory reported a sufficient frequency of QC to assess whether the results have been reported to an acceptable accuracy and precision, with the exception of the following: <ul style="list-style-type: none"> Laboratory duplicate were not reported for moisture content. The precision of moisture content has been considered acceptable based on the presence intra- and inter-laboratory duplicates were available and acceptable. The inter-laboratory duplicate was not analysed for <i>trans</i>-chlordane and <i>cis</i>-chlordane; however it was reported for total chlordane. The precision of this data can be assessed as acceptable based on the presence of intra-laboratory field duplicates and laboratory duplicates for <i>trans</i>-chlordane. |
| Tests requested/reported | Samples were not analysed and reported as requested on the COC, as several jars were broken when arriving at the laboratory, including two intra-laboratory duplicates (QA/QC_01_160413 and QAQC_09_160413). Two other intra-laboratory duplicates were analysed (QAQC_07_160413 and QAQC_08_160413) to comply with the frequency of field QAQC samples; however, the two intra-laboratory duplicates are not comparable to the intra-laboratory duplicates analysed, as they are taken from different locations. |
| Limits of reporting | LORs were sufficiently low to enable assessment against adopted guideline criteria. |
| Data transcription | A random 10% check of the laboratory results identified no anomalies within the electronic data, the laboratory reports, and tables generated by URS. |

Sample management

| | |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Chain of Custody | Chain of custody documents completed. |
| Handling and preservation | Samples were transported with ice bricks and were received at 11.7 to 12.0°C in batch EB1309212. Samples from batch EB1309212 were received above the recommended temperature range; therefore, some losses through volatilisation may have occurred and sample concentrations for BTEXN and TPH C ₆ –C ₉ (and other volatiles) may be may be biased low. It should be noted that the ambient temperature across the site throughout the year and at the time of sampling is >30°C. Samples are chilled in the field on ice and transported to the laboratory with appropriate cooling medium. Samples remain chilled while cooling medium is present; however, over the 24hr transit period to the laboratory cooling medium will melt and samples may warm. Due to the initial sample temperature and subsequent appropriate cooling of samples, losses due to volatilisation are considered to be limited. |
| Holding time compliance | Samples were extracted and analysed within recommended holding times, with the following exceptions: <ul style="list-style-type: none"> Moisture content was exceeded 3 day for analysis for all samples in batch EB1310418; Polychlorinated biphenyls (PCB), organochlorine pesticides (OC), phenolic compounds, total petroleum hydrocarbons (TPH) and total recoverable hydrocarbons (TRH) were exceeded 7 days for extraction for SP04_06_160413 and PAHs for all samples in batch EB1310418; and Total petroleum hydrocarbons, total recoverable hydrocarbons, BTEXN were exceeded 3 day for extraction and analysis, respectively, for all samples in batch EB1310418. <p>Moisture content is not an analyte of potential concern; hence, the holding time exceedance for this analyte does not affect the interpretation of the results. As all results for PCB, OC, phenolic compound, TPH</p> |

and TRH were all reported below the LOR, this potential for under reporting is not considered to affect the interpretation of results.

Data precision

Field duplicate RPDs

RPDs exceeded control limits for the following sample analysis. (Samples with higher reported concentrations are in bold).

- **SP03_23_160413** and QAQC_05_160413 for Chromium (67%);
- **SP03_23_160413** and QAQC_05_160413 for Lead (104%);
- **SP03_23_160413** and QAQC_05_160413 for Zinc (134%);
- **SP05_05_160413** and QAQC_07_160413 for Moisture Content (38%);
- **SP05_05_160413** and QAQC_07_160413 for Zinc (74%);
- **SP05_05_160413** and QAQC_08_160413 for Moisture Content (35%); and
- **SP05_05_160413** and QAQC_08_160413 for Zinc (91%).

Elevated RPDs are common in soil samples and this apparent lack of precision is likely due to heterogeneity of the distribution of metals in soils at the site. However, care should be taken when interpreting results for zinc, where close to guidelines.

As results for lead were less than 3 times the guidelines, this is not considered to affect the interpretation of the results for lead. As there is no adopted guideline for chromium and moisture content is not an analyte of potential concern, this is not considered to affect the interpretation of the results for these analytes.

Field triplicate RPDs

RPDs exceeded control limits for the following sample analysis. (Samples with higher reported concentrations are in bold).

- **SP03_18_160413** and **QAQC_02_160413** for Barium (102%);
- **SP03_18_160413** and QAQC_02_160413 for Manganese (68%);
- **SP03_18_160413** and **QAQC_02_160413** for Zinc (53%);
- **SP03_23_160413** and QAQC_06_160413 for Lead (65%);
- **SP03_23_160413** and QAQC_06_160413 for Zinc (122%);
- **SP05_10_160413** and QAQC_10_160413 for Barium (109%);
- **SP05_10_160413** and QAQC_10_160413 for Manganese (59%); and
- **SP05_10_160413** and QAQC_10_160413 for Zinc (42%).

Elevated RPDs are common in soil samples and this apparent lack of precision is likely due to heterogeneity of the distribution of metals in soils at the site. However, care should be taken when interpreting results for zinc, where close to guidelines.

As results for lead and manganese were less than 3 times the guideline, the elevated RPDs are not considered to affect the interpretation of the results for lead. As there is no adopted guideline for barium, this is not considered to affect the interpretation of the results.

Laboratory duplicate RPDs

The following laboratory duplicate RPD exceeded LOR based limits:

| Batch | Analyte | Data | LCL (%) | UCL (%) | Comment |
|-----------|-----------|-------|---------|---------|-------------------|
| EB1309212 | Chromium | 23.5% | 0 | 20 | Exceeded by 3.5% |
| EB1309212 | Chromium | 52.6% | 0 | 50 | Exceeded by 2.6% |
| EB1309212 | Manganese | 61.9% | 0 | 20 | Exceeded by 41.9% |
| EB1309212 | Vanadium | 64.1% | 0 | 50 | Exceeded by 14.1% |
| EB1309212 | Zinc | 67.1% | 0 | 50 | Exceeded by 17.1% |
| EB1310481 | Chromium | 119% | 0 | 20 | Exceeded by 99% |
| EB1310481 | Manganese | 131% | 0 | 20 | Exceeded by 111% |

Elevated RPDs are common in soil samples and this apparent lack of precision is likely due to heterogeneity of the distribution of metals in soils at the site. However, care should be taken when interpreting results for manganese, vanadium and zinc, where close to guidelines. As there are no adopted guidelines for chromium, the elevated RPDs are not considered to affect the interpretation of the results.

Data accuracy

Laboratory control spike recovery

The following recoveries were outside control limits and may affect data interpretation:

| Batch | Analyte | Recovery (%) | LCL (%) | UCL (%) | Comment |
|-----------|-------------------|--------------|---------|---------|-----------------------------------------------|
| EB1309212 | 4,4'DDT | 68.6 | 80 | 155 | Recovery less than the lower control limit |
| EB1309212 | Acenaphthylene | 121 | 67 | 118 | Recovery greater than the upper control limit |
| EB1309212 | Fluoranthene | 124 | 69 | 116 | Recovery greater than the upper control limit |
| EB1309212 | Benz(a)anthracene | 125 | 61 | 120 | Recovery greater than the upper control limit |
| EB1309212 | Chrysene | 126 | 62 | 119 | Recovery greater than the upper control limit |
| EB1310481 | Pentachlorophenol | 103 | 20 | 100 | Recovery greater than the |

| | | | | | | |
|--|-----------|------------------------|-----|----|-----|-----------------------------------------------|
| | | | | | | upper control limit |
| | EB1310481 | Anthracene | 122 | 70 | 115 | Recovery greater than the upper control limit |
| | EB1310481 | Dibenzo(a,h)anthracene | 142 | 70 | 134 | Recovery greater than the upper control limit |

LCS recovery for 4,4’DDT was lower than the lower control limit. Therefore, the potential exists for concentrations of 4,4’DDT to be biased low by 30%. As there is no applicable guideline for 4,4’DDT, this is not considered to have an impact on validity of conclusions.

LCS recoveries for acenaphthylene, fluoranthene, benz(a)anthracene, chrysene, pentachlorophenol, anthracene and dibenzo(a,h)anthracene were greater than the upper control limit by 3%, 8%, 5%, 7%, 3%, 7% and 8%, respectively. Therefore, the potential exists for concentrations of these analytes to be biased high by up to 21%, 24%, 25%, 26%, 3%, 22% and 42%, respectively. As there are no applicable guidelines for these analytes, this is not considered to have an impact on validity of conclusions.

Matrix spike recovery

The following recoveries were outside control limits and may affect data interpretation:

| Sample | Analyte | Recovery (%) | LCL (%) | UCL (%) | Comment |
|----------------|-----------|----------------|---------|---------|---------------------------------------------------------------------------------------|
| SP03_02_160413 | Manganese | 132 | 70 | 130 | Recovery greater than the upper data quality objective |
| SP03_44_160413 | Zinc | 50.7 | 70 | 130 | Recovery less than the lower data quality objective |
| SP04_04_160413 | Barium | Not Determined | - | - | MS recovery not determined, background level greater than or equal to 4x spike level. |
| SP04_04_160413 | Manganese | 136 | 70 | 130 | Recovery greater than the upper data quality objective |

Matrix spike recoveries were reported greater than the upper data quality objective for manganese by up to 6%; hence, there is potential for reported concentrations of manganese to be biased high by up to 36%. As results for manganese is reported well below the adopted guidelines, this is not considered to affect the interpretation of the results.

Matrix spike recoveries were reported less than the lower data quality objective for zinc by up to 20%; hence, there is potential for reported concentrations of these analytes to be biased low by up to 50%. As ILs have been adopted for zinc, care should be taken with interpreting results close to the adopted guidelines.

The matrix spike for barium was not determined due to background levels being greater than the spike level. However the accuracy of the results for barium are assessed as acceptable, due to the presence of other laboratory quality control data, including method blanks, LCS recoveries and matrix spikes for analytes analysed under the same analytical method.

Surrogate spike recovery

The surrogate spike recoveries were within control limits.

Blank monitoring

Rinsate blank

Concentrations were not detected above the LOR for all analytes tested, with the following exceptions:

Concentrations of zinc (0.045 mg/L) were detected above the LOR in the rinsate sample collected on 16th of April 2013 (QCB01_160413) in batch ES1309212. All soil samples collected on 16 April reported concentrations of zinc well above the LOR, and samples have been assessed for the potential for false positives due to cross-contamination and none were found; hence, this is not considered to affect the interpretation of results.

Field blank

N/A

Trip blank

N/A

Method blank

Concentrations of all analytes were reported below the LOR.

Chromatograms

N/A

Other observations

Batch EB1309212

- EG005T (Total Metals): Sample EB1309212-001 (SP03_01_160413), 022 (SP03_22_160413), 043 (SP03_43_160413) show poor duplicate results due to sample heterogeneity. Confirmed by visual inspection.
- EG005T (Total Metals): Sample EB1309212-002 (SP03_02_160413), 044 (SP03_44_160413) show poor matrix spike recovery due to sample heterogeneity. Confirmed by visual inspection.

Batch EB1309212

- EG005T (Total Metals by ICP-AES) Samples EB1310481 - 001 (SP02_10_160413) shows poor duplicate results due to sample heterogeneity. Confirmed by visual inspection
- EG005T (Total Metals by ICP-AES): Sample EB1310481 - 002 (Sp04_04_160413) shows poor matrix spike recovery due to matrix interference. Confirmed by re-extraction and re-analysis.

| 202 | | | | | | | | | | | | |
| 203 | Note: Data have multiple DLs - Use of KM Method is recommen | | | | | | Number treated as Non-Detect | | | | | 21 |
| 204 | For all methods (except KM, DL/2, and ROS Methods), | | | | | | Number treated as Detected | | | | | 0 |
| 205 | Observations < Largest ND are treated as NDs | | | | | | Single DL Non-Detect Percentage | | | | | 100.00% |
| 206 | | | | | | | | | | | | |
| 207 | Warning: There are only 3 Distinct Detected Values in this data set | | | | | | | | | | | |
| 208 | The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods. | | | | | | | | | | | |
| 209 | Those methods will return a 'N/A' value on your output display! | | | | | | | | | | | |
| 210 | | | | | | | | | | | | |
| 211 | It is necessary to have 4 or more Distinct Values for bootstrap methods. | | | | | | | | | | | |
| 212 | However, results obtained using 4 to 9 distinct values may not be reliable. | | | | | | | | | | | |
| 213 | It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates. | | | | | | | | | | | |

| 539 | | | | | | | | | | | | |
| 540 | ProUCL computes and outputs H-statistic based UCLs for historical reasons only. | | | | | | | | | | | |
| 541 | H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide. | | | | | | | | | | | |
| 542 | It is therefore recommended to avoid the use of H-statistic based 95% UCLs. | | | | | | | | | | | |
| 543 | Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution. | | | | | | | | | | | |
| 544 | | | | | | | | | | | | |
| 545 | Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL. | | | | | | | | | | | |

| | | | | | | | | | | | | | |
|-----|------------------------------------------------------------------------------------------------------------------------------|---|---|---|---|-------------------------------------------------------|------------------------------------------------------|---|---|---|---|---------|--|
| | A | B | C | D | E | F | G | H | I | J | K | L | |
| 608 | Number of Valid Data | | | | | 21 | Number of Detected Data | | | | | 2 | |
| 609 | Number of Distinct Detected Data | | | | | 2 | Number of Non-Detect Data | | | | | 19 | |
| 610 | | | | | | | Percent Non-Detects | | | | | 90.48% | |
| 611 | | | | | | | | | | | | | |
| 612 | Raw Statistics | | | | | Log-transformed Statistics | | | | | | | |
| 613 | Minimum Detected | | | | | 0.07 | Minimum Detected | | | | | -2.659 | |
| 614 | Maximum Detected | | | | | 0.08 | Maximum Detected | | | | | -2.526 | |
| 615 | Mean of Detected | | | | | 0.075 | Mean of Detected | | | | | -2.592 | |
| 616 | SD of Detected | | | | | 0.00707 | SD of Detected | | | | | 0.0944 | |
| 617 | Minimum Non-Detect | | | | | 0.05 | Minimum Non-Detect | | | | | -2.996 | |
| 618 | Maximum Non-Detect | | | | | 0.05 | Maximum Non-Detect | | | | | -2.996 | |
| 619 | | | | | | | | | | | | | |
| 620 | | | | | | | | | | | | | |
| 621 | Warning: Data set has only 2 Distinct Detected Values. | | | | | | | | | | | | |
| 622 | This may not be adequate enough to compute meaningful and reliable test statistics and estimates. | | | | | | | | | | | | |
| 623 | The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV). | | | | | | | | | | | | |
| 624 | | | | | | | | | | | | | |
| 625 | Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations. | | | | | | | | | | | | |
| 626 | | | | | | | | | | | | | |
| 627 | The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods. | | | | | | | | | | | | |
| 628 | Those methods will return a 'N/A' value on your output display! | | | | | | | | | | | | |
| 629 | | | | | | | | | | | | | |
| 630 | It is necessary to have 4 or more Distinct Values for bootstrap methods. | | | | | | | | | | | | |
| 631 | However, results obtained using 4 to 9 distinct values may not be reliable. | | | | | | | | | | | | |
| 632 | It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates. | | | | | | | | | | | | |
