

ENVIRONMENTAL MANAGEMENT POLICY

ABC Transport has adopted a corporate environmental policy.

ABC Transport believes that corporate social responsibility and sustainability is best achieved by embedding the following into all operational aspects of the business:

Our policies, procedures and practices deliver benefits to ABC Transport's people, customers, consumers, to the community and to the environment, and that result in responsible and ethical business conduct.

ABC Transport commits to the ongoing, continued improvement of business policies, practices and strategies that impact and/or result in productive and positive outcomes for:

- Our consumers
- Our customers
- Our suppliers
- Our people
- The wider community
- Our shared environment
- Our business operations

The ABC Transport Environmental Management System is based on the EPA certification held, a management system standard designed to help organisations comply with environmental laws and ensure that major environmental risks and liabilities are properly identified, minimised and managed.

As part of our sustainability commitment to the planet we have processes to manage key environmental aspects including energy, water use and lower environmental loads in waste water, air and solid wastes, aspects of our business.

Senior Management and site(s) have responsibility for:

- Sustainable management of water, noise and air.
- Solid waste reduction.
- Greenhouse gas and energy reduction.
- Safe handling of chemicals.

We know that by meeting our environmental management obligations locally we are working towards achieving in-part in helping to protect our planet.

ABC Transport is a holder of EPA Certification.
