I am writing to object to the Carpentaria Pilot Production project by Imperial Oil and Gas for the following reasons. 1. Imperial does not consider downstream emissions of their product. All downstream emissions contribute to climate change. Currently the planet is undergoing the effects of climate change at a pace not previously anticipated. All contributions to greenhouse gases are now critically significant, even more so if they are a prelude to greater emissions in the future. 2. Potential impacts on groundwater quantity and contamination have not been adequately assessed. 3. The management of waste-water from operations has not been assessed to a sufficient level where an environmental impact evaluation can be made. 4. There would appear to be deficiencies in surveys to assess the impact of operations on both local fauna and migratory species of birds. 5. It is essential that traditional owners be given the opportunity for a full and informed contribution to any proposal which has the potential to impact their lands and influence on Country.
