1) The purpose of this project burn fossil fuels to add CO2 into the planets atmosphere. Science says this will make the planet hotter than the hottest year last year in homo sapien history. Your agency should protect us from this. 2) Huge water resources will be used and possibly damage for 1000s of years. Many many examples of such project failure cause contamination of water resources. This is likely from at least a few of the hundreds of drilling of the following decade. 3) There is no real benefit to the community only to Imperial who notoriously pay little tax or royalty for the privilege. Some FIFO workers may benefit but their families will likely miss them. There is better work to be done. 4) Traditional Owners again are manipulated or ignored. 5) Your purpose is to protect the land and the people from our ignorant politicians and greedy fossil fuel businesses please.
