PLEASE SUPPORT RENEWABLES!

PLEASE DO NOT SUPPORT FOSSIL FUEL, LIKE GAS IN BAROSSA!

Santos' own documents reveal that the lifecycle emissions of the Barossa project would be 296Mt Co<sub>2</sub>-e. For context, the NT's total annual emissions in 2020 were 17.3 MtCO<sub>2</sub>-e. **Barossa is a carbon bomb that our climate cannot afford.**

Not only will the Barossa project be a disaster for our atmosphere, but the pipeline into Darwin poses a range of risks to our harbour and marine life.

Thanking you in advance for your kind attention,

Best regards,
