To the EPA in regard to the Carpentaria Pilot Project; I submit that the Imperial Oil and Gas Carpentaria pilot project be rejected outright on the following grounds: - The greenhouse gas emissions from this project will be very significant, the company is trying to hide this by ignoring the downstream emissions. Climate change is a global issue and therefore it makes no difference at what stage of the process the emissions are released into the atmosphere. The impact is equally damaging. - The risks of groundwater contamination and waste water management are not sufficiently assessed in the company's EMP. - Traditional Owners have not been properly consulted regarding the impacts on biodiversity and water. - Nationally threatened and migratory species will undoubtedly be impacted negatively by this project. Imperial have been dismissive of this fact. Yours Sincerely, Jonathan Graham
