To whom it may concern. I am writing to you regarding the fracking in the NT. I am not a person of fancy words that beat around the bush and achieve nothing . So i am writing to you with a common sense approach regarding fracking . For many years have heard no good about fracking especially in the USA and Queensland , , which tells me that fracking can only be bad . It is my understanding that they first cut a grid pattern for their well sites which destroys the bushland and in turn decimate the wild life , then they drill down with there toxic mixture of water and chemicals under great pressure which fractures the shale and harvest the gas that dose not escape along with the chemicals that poison the underground water that farmers and communities further south rely on .therefore fracking can only be bad, bad for the bush , bad for the wildlife and also bad for the environment and for climate change. I am asking you to take these points into consideration and protect future generations . implore you to tell these fracking idiots driven by profit and greed to bugger off yours sincerely Rick Shulver
