While the impact of the global warming becomes more damaging and unavoidable every day, it is so upsetting that these kinds of projects are still seeking approvals to continue polluting our atmosphere for short term profits! Imperial Oil and Gas must have a full Environmental Impact Statement done, as a Supplementary Environmental Report is not adequate. Their ground water assessment is not a proper document and the Traditional Owners have not been fully informed or consulted on the impact of this project. Future generations will be appalled that such unnecessary projects continue to get approvals while the consequences can no longer be denied by anyone with a scientific background. STOP this project NOW!
