Submission contents

Enter your submission below.
Maximum of 500 words:

* Loss of trees/shrubs and bush in general means loss of oxygen generation. Australia-ASEAN Power Link submission * Massive use of herbicide means leaching into aquifers. * Reflection of 12000 ha.of glass into the ambient atmosphere will create heat. * Who will(or can) do the cleaning of 12000 ha? The NT cannot get enough workers to pick our produce! * what methods of cleaning will be employed; ie water,brooms, compressed air, or even humans? * If water, it will surely be wasted. * When life of panels expire(if it gets this far) what of the waste glass? * Will substations be employed? If so,subsea or surface? * Newcastle Waters is a PASTORAL lease: why should a pastoral lease be subverted for commercial use? * Is this a hoax/scam? And Australians will be left holding the bag? * 12000 hectares is a lot of country; that's a huge farm! * If this scheme does eventuate,I see Australians getting little or nothing from it.
