Submission contents:

I am a Victorian who loves the Territory. I love its forests, waterfalls, grasslands, and rivers, and I know that the warm, sunny Territory does NOT need gas. I went solar four years ago, and have saved hundreds on my electricity bills. I still have gas hot water and a gas range, and plan to replace them with electricity when I renovate in 2025, because gas is destructive, poisonous, flammable, and EXPENSIVE. Please ditch gas and gas development immediately, and invest in solar power. If Victoria can do it, the sunny Territory can!
