Having lived in the Northern Territory for over a decade; nothing compared to the First Nations, I have found time and time again how let down all of the people are re the dreaded hydraulic fracturing industry . TIME AGAIN no one can give the assurances we need to progress because fracking is not for the people nor our water and country. Australia is used as a tax haven and an environmental sacrifice zone for unscrupulous cartels ...I know gas and oil cartels have NO interest in the country they want to frack . Nor are they observing environmental impact assessments in a legitimate and timely manner . As far as the economic returns we all know it is for the top echelons of a corporation who give out inaccurate readings to their share holders . Why does Australia just roll over when it comes to our water allocations - totally incomprehensible amounts to he filthy industry which threatens our endangered species ?? Why does the Nt govt and the corporations who are writing the ir policies fail miserably by Traditional owners??? We know TOs are bribed with cash payments . Why does all level of government talk up tourism when they are creating a wasteland for migratory birds????? What kind of future are we leaving ? NONE that is pristine and toxic free. THOSE who re making ruinous decisions are not heeding a ny of the Paris Accord zero emissions by 2030 nor can they say that one scientist understands the trigger / risk of cross contamination due to fracking a ctivity - no respect for ground water and the complexities of the Nt hydrology . BITTERLY DISSAPOINTED .We will not give up Carol Randall
