**Submission contents:**

Dear Sir, Madam and Other, I do not support fracking, I have a strong conviction to protect water and health of our earth at all cost. My ancestors have walked and breathed in the Northern Territory for longer than history books have been made. The groundwater is sacred and the rate at which it is created means that taking any more than is necessary for our survival is extreme folly. I invite you to learn about the source of this water and how it is manufactured by the earth over millions of years, the story which presides the "œproduct" of which your mind now holds as an idea in reference to this precious and priceless Aqua, Kapi, Kwatja, Ngapa (water). The great Artesian Basin and its offshoots are the largest reservoir in the world. We are not America. Australia doesn't want to be trashed and poisoned like the fracking mess that never got cleaned up there. There is no way that anyone should allow fracking to occur, invest in something else. This operation screams under table deals and political supply and demand corruption. Get Real and stop this plan, we can do without Gas, no matter the consequences.
