

March 2022

# Appendix Y – Industry Capability Network (NT) Report

Australia-Asia PowerLink Environmental Impact Statement

STATEMENT OF CAPACITY

# Capability Mapping: Australia- Asia PowerLink (AAPowerLink) Project

## STATEMENT OF CAPACITY

# Capability Mapping: Australia-Asia PowerLink (AAPowerLink) Project

Sun Cable is proposing to build a renewable energy transmission system called the Australia-Asia PowerLink (AAPowerLink). The flagship project combines the world's largest solar farm and battery storage facility in the Barkly Region of the Northern Territory, with a 5,000 km transmission system to supply Darwin and Singapore markets with reliable, competitively priced, dispatchable, and high-volume renewable electricity.

The Australia-Asia PowerLink (AAPowerLink or Project) comprises the following six key components:

- Powell Creek Solar Precinct in the Barkly Region of the NT where electricity will be generated, stored, and transmitted
- Overhead Transmission Line (OHTL) to transmit electricity from the Solar Precinct to Darwin
- Darwin Converter Site including Voltage Source Converters (VSC), energy storage and network connection to supply electricity to the Darwin region

- Cable Transition Facilities at Murrumujuk and Gunn Point Beach to transition power cables between land and sea
- Subsea Cable System extending between the Cable Transition Facilities and Singapore
- Singapore Converter Station to receive electricity and supply the Singapore electrical network.

To support Sun Cable's AAPowerLink Project, Sun Cable commissioned Industry Capability Network of the Northern Territory (ICN NT) to perform a capability mapping and gap analysis study of trades, services and supply capacity in the Northern Territory.

With the anticipated opportunities for businesses to provide a service or supply to the Project expected to be of a large scale, understanding industry capability at all tier levels enables development of a more robust local procurement and contracting strategy.

ICN NT's study identified 1,512 unique businesses (including 163 unique Aboriginal majority-owned) which had identified capabilities potentially suitable against the 145 identified work packages.

The major industry segments identified were:

- Construction Services (353 businesses including 58 Aboriginal majority-owned)
- Suppliers and Wholesalers (279 businesses including 14 Aboriginal majority-owned)
- Professional Services (226 businesses including 65 Aboriginal majority-owned)

Key findings from the study include:

- Local industry has a high capacity to fulfil the service and supply needs of the Project, at varying tiers across all twelve (12) categories mapped in this study
- Aboriginal majority-owned businesses have a moderate capacity to fulfil service and supply needs of the Project with high capacity in Civil, Construction, Electrical, Vehicles & Machinery and Professional Services

The study concluded that 69% of businesses identified were small with a turnover below \$10 million and less than 20 employees meaning opportunities for these businesses is likely to be at the second or third tier of procurement due to the Project's scale. Further work will be undertaken in 2022 to better understand and leverage local capabilities as the Project requirements and work packages are better defined.

*ICN introduces Australian companies to the supply chains of major projects. Currently registered on ICN Gateway are around 4,000 businesses based in the Northern Territory and around 80,000 businesses nationally.*

# ABOUT THE STUDY

To support Sun Cable's Australia-Asia Power-Link Project (AAPowerLink), a capability mapping and gap analysis study was undertaken to highlight the supporting trades, services and supply capacity in the Northern Territory.

Sun Cable commissioned the Industry Capability Network of the Northern Territory (ICN NT) to produce the report to inform the contracting and procurement approach for the AAPowerLink. With the anticipated opportunities for businesses to provide a service or supply to the Project expected to be of a large scale, understanding industry capability at all tier levels enables a more robust local procurement strategy.

ICN NT has conducted preliminary business mapping of the 145 identified scopes of work utilising its existing database of businesses in the Northern Territory. Follow-up analysis will be undertaken in approximately Q2 2022 to provide a more detailed interrogation of all businesses on the ICN NT database against refined scopes of work provided by Sun Cable.

Currently, there are 4,000 businesses based in the Northern Territory and approximately 80,000 businesses nationally registered on the ICN Gateway. ICN Gateway is an online project portal that enables open and transparent communication with industry, introducing local suppliers into project supply chains.

ICN opens Australian businesses to what is known as Full, Fair and Reasonable opportunity as defined by the Australian Federal Government in their Australian Industry Participation National Framework.

**Full:** Australian industry has the same opportunity afforded to other global supply chain partners to participate in all aspects of an investment project;

**Fair:** Australian industry is provided the same opportunity as global suppliers to compete on investment projects on an equal and transparent basis, including being given reasonable time in which to tender; and

**Reasonable:** tenders are free from non-market burdens that might rule out Australian industry and are structured in such a way as to provide Australian industries the opportunity to participate in investment projects.

ICN in the Northern Territory is acknowledged as the leading provider of information about Northern Territory business capability. Nationally, ICN contributes to increased economic activity and employment for Australia by helping Australian industry gain a greater share of domestic business opportunities.

## KEY REQUIREMENTS FOR INDUSTRY

Undertaking a Supply Chain Mapping and Gap Analysis Study to support Sun Cable's AAPowerLink Project requires an understanding of the industry capabilities needed across the Project. Sun Cable provided the work package breakdown and scope definitions. Information within this report was captured from the ICN database and used to measure businesses' capabilities in the Northern Territory against the 145 identified scopes of work.

Research and analysis of capabilities was then undertaken by ICN in order to identify businesses with the capacity to perform works to the scopes developed.

This was achieved by:

- Reviewing information contained within ICN profiles maintained on the ICN Gateway
- Cross-checking industry website data
- Utilising the internal knowledge of ICN NT Industry Advisors
- Emailing requests for information
- Phone calls with relevant contacts
- One-on-one meetings

The report identifies businesses that hold the current capability to undertake each scope identified, with no minimum criteria applied for business size, scale or accreditations.

ICN liaised directly with potential industry through email, phone, and one-on-one meetings to confirm the following criteria for businesses:

- Current Capabilities
- Business Scale (Estimated Turnover bracket)
- Business Size (Number of Employees)
- Accreditation and Certification information
- Previous Significant Project history

This report delivers an understanding of the business capability to undertake the identified scopes provided by Sun Cable in the Northern Territory current as of December 2021.
