After review of the EIS supplement submitted for TNG's Darwin Processing Facility, I strongly urge the NTEPA to provide approval this project. The company has in my view has exceeded its responsibility for sustainable development with the inclusion of a zero discharge waste water recycling plant and a ~65% reduction in water usage. These are the sort of responsible green projects Australia and the territory needs, for jobs and to put the NT on the map for critical energy metals such as vanadium. The company also appears to be pursuing a green vanadium battery rollout across remote communities while also investing in co developing C02 neutral hydrogen technology. The NT needs jobs and I and many others believe this is the sort of project Australia should be making a priority to get going. I am extremely pleased with the solutions detailed in the EIS supplement and urge the NTEPA to get things moving for the NT. An absolutely brilliant project this is.
